AIM202-S200 – INTERMEDIATE

Rapid Generative AI Adoption with Capgemini Jump Starts (sponsored by Capgemini)

Join us to learn about Generative AI Jump Starts from Capgemini! Discover how to accelerate your adoption of cutting-edge AI technologies from start to working solution in as little as two weeks. Learn about overcoming challenges in AI deployment, integrating AI into existing processes, and balancing human-AI interaction. Gain insights into strategic planning, hands-on learning, and developing an actionable AI roadmap. This session will empower you to unlock AI's potential, enhance customer engagement, and drive innovation. Don't miss this opportunity to transform your mission delivery and achieve The Future You Want! This

June 11th | 09:00 AM-09:30 AM

Capgemini Government Solutions: Proven Solutions for Mission Owners

A Unique Focus on the Federal Market

Independent

CGS has operated as an independent division of Capgemini since 2002 and has a deep knowledge of the US Federal government.

Experienced

We draw on deep public sector expertise as a leading provider to Mission Owners across the sector.

Big Business Capability, Small Business Agility

We have large company reach-back, small business agility, and an entrepreneurial approach to delivering innovation.

Partnership Philosophy

Our experts join forces with yours to form a cohesive team.

Challenge the Status Quo

We bring a fresh approach, without entrenched bureaucracy or interests.

Unique Approach

Capgemini is at the forefront of innovation. We bring commercial best practices to the US Federal agencies, partners, and DIB.

Capgemini Government Solutions: Proven Solutions for Mission Owners

National Security & Defense

Health & Benefits

Civilian

AWS GovCloud (US)

Supports US government compliance requirements, including ITAR, FedRAMP, DoD, and more

Operated by employees who are vetted "US Persons"

Root account holders are confirmed US Persons

Available to US government agencies and organizations in government-regulated industries, that meet AWS GovCloud (US) requirements for access

Technical leaders are now **even more strategic** and close to the business, leading the charge and helping the company adapt to advances in technology.

The CIO agenda in 2023: Driving growth and transformation, Venturebeat, Jan 2023

Innovate faster

Stay secure and reliable at scale

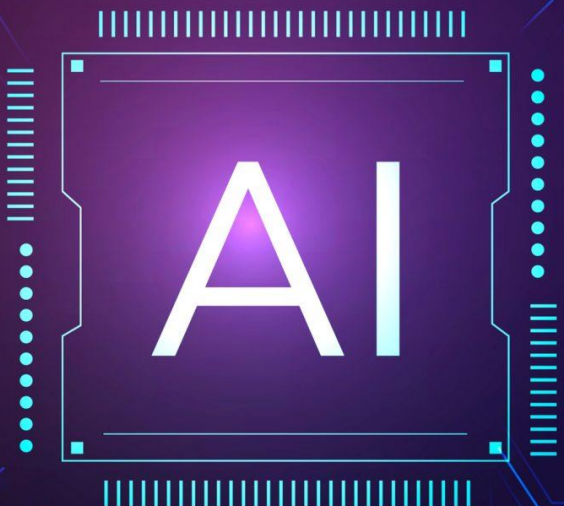

Achieve greater flexibility

Challenges Faced

By Public Sector organizations when deploying or enabling Generative AI

- ✓ Finding vendors with proven experience in AWS GovCloud for FedRamp and DoD CC SRG
- ✓ Where to Start? What to do first?
- ✓ Cost
- ✓ Skills Gap
- ✓ Governance and Security
- ✓ Quality and reliability of AI outputs
- ✓ Data infrastructure limitations
- ✓ Determining the right balance between human and AI interaction

AI

What Are Jump Starts?

Jump Starts are a transformative **two-day strategic envisioning** experience where our expert team helps clients rapidly uncover AI opportunities, develop a concrete implementation roadmap, and gain hands-on experience with working solutions – turning AI complexity into clear business value in just 48 hours.

Two Days To Transformation

Use Jump Starts To Accelerate AI and Integrate With Best Of Cloud

Use Jump Starts to accelerate time to value of AI tools for business and developers to augment the work that people do, freeing up time for more creative tasks and innovative thinking

The Jump Start Workshops

Modern Enterprise Search

Transformative enterprise search solutions for businesses

Conversational Knowledge Mining

Extracting insights from conversational data

Intelligent Document Processing

Automating document workflows with AI

Building Agentic Workflows

Creating autonomous workflows using AI agents

Deep Research on Unstructured Data

Analyzing unstructured data for actionable insights

AI Insights and Data Assistant

Personalized data assistant providing business insights

AI Document Reviewer

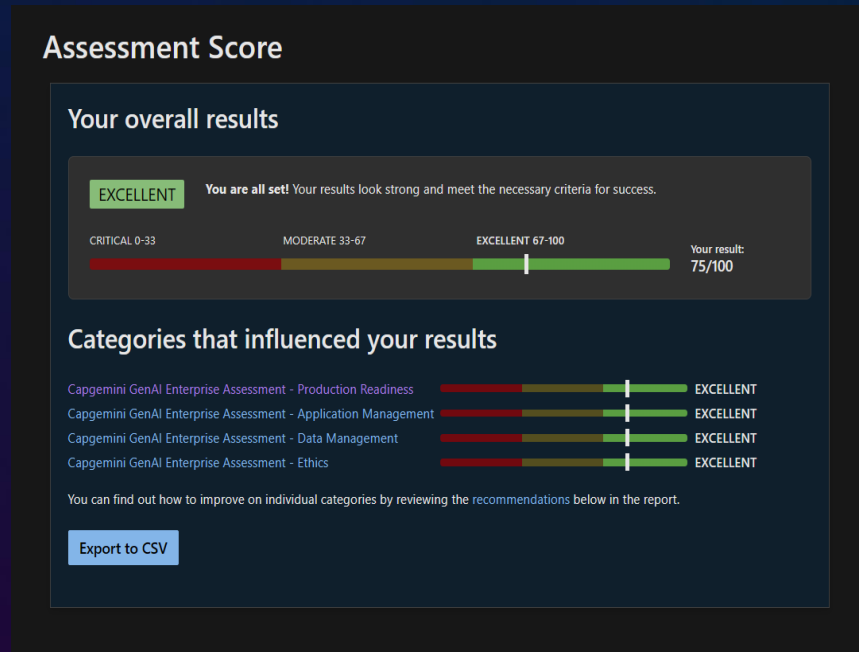

Automated document review and analysis assistant

GenAI Application Evaluation

Assessing generative AI applications for business use

AI Readiness Jump Start Workshop

A Gen AI Jump Start focused on exploring a company's readiness to develop, run and maintain generative AI solutions in production. This workshop helps **benchmark** the organization when it comes to developing intelligent applications as compared to its industry peers.

AI Impact and Benchmarking Assessment

Examine the key functions of the organization and identify the strengths, weaknesses, opportunities, and threats AI could pose

Envision the Opportunity

Using uncovered use cases, we deep dive to discover key success metrics and challenges to qualify solutions

Business Case Mapping

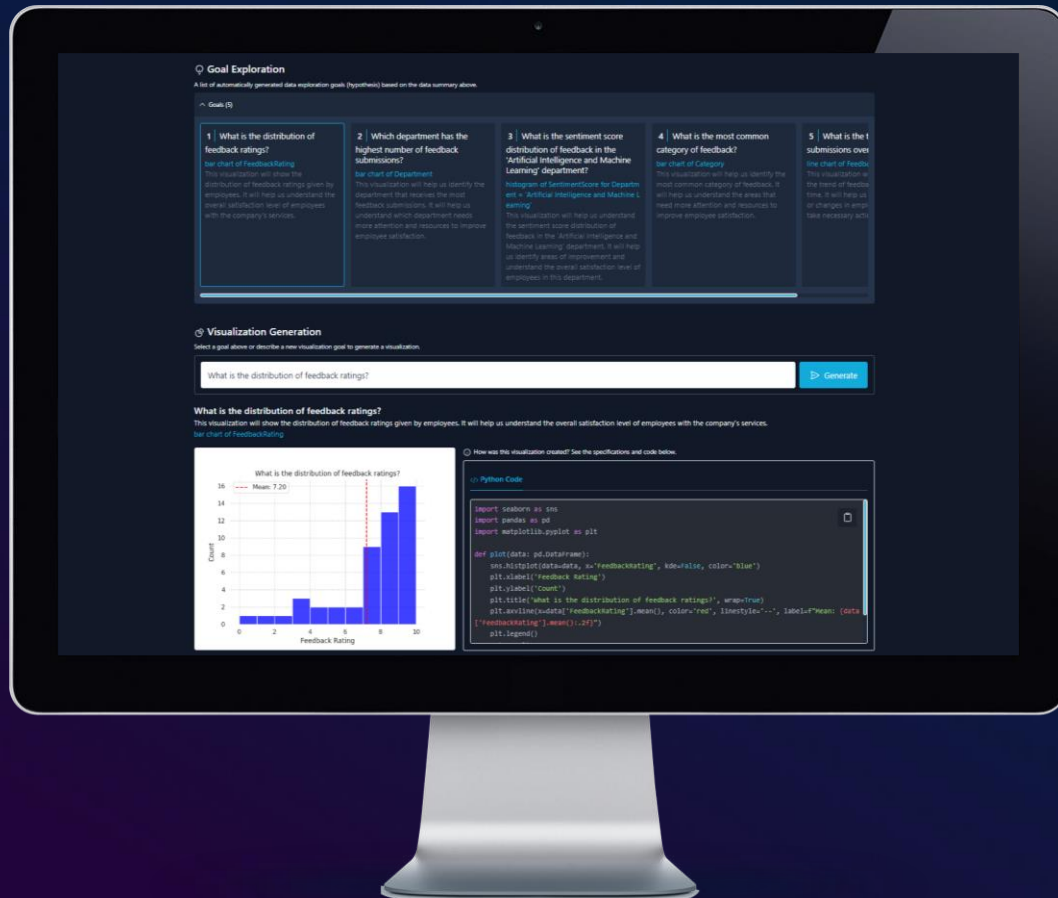

Outline prioritized use cases against value pillars, business support, operational efficiency, and innovation.

AI Strategy and Next Steps

Create a cohesive and unified AI strategy with operating models, secure design, people, and process to deliver outcomes.

AI Insights and Data Assistant

A Gen AI Jump Start focused on enabling businesses to understand how AI can accurately and securely **analyze and visualize complex datasets** within their data platform without the coding skills and tools that a traditionally required for ad-hoc analysis.

Data Understanding

Converts data into rich, compact natural language summaries, helping LLMs understand the context.

Insight Creation

Creates potential goals, guiding users to focus on the most meaningful and impactful visualizations based on their data.

Visualization Generation

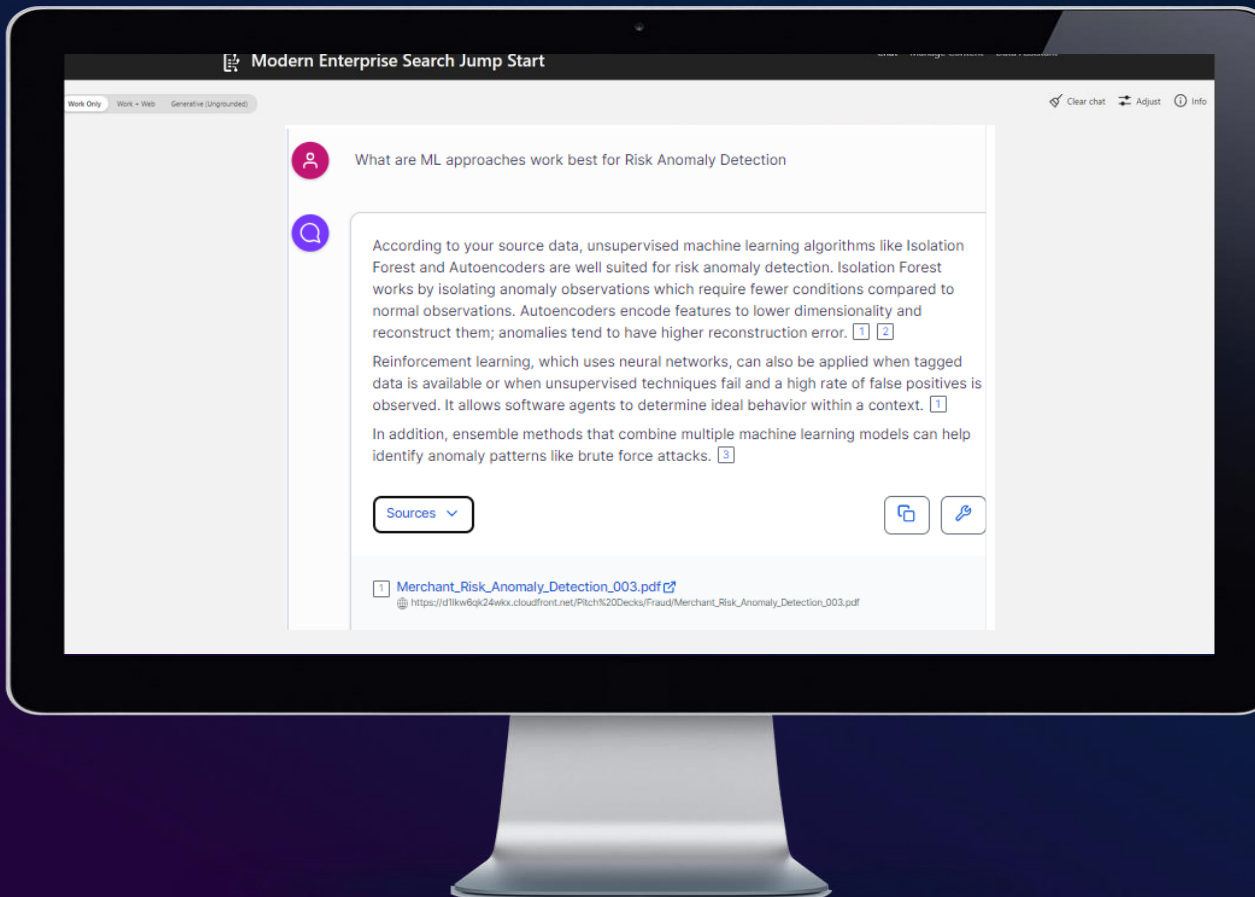

Generates, refines, and executes code, ensuring the output meets design, task, and perceptual standards.

Quality and Reliability

Compiles metrics assess quality of generated visualizations, providing users with more confidence in the results.

Modern Enterprise Search

A Gen AI Jump Start focused on empowering businesses to create an “agent” that will enable users to **have a conversation with their private/domain specific data** by leveraging the power of a large language model.

Enhanced User Engagement

Provides a more engaging and intuitive user experience by allowing natural language style queries and receiving relevant, context aware responses

Accurate and Relevant Information Retrieval

A hybrid search approach combines the strengths of retrieval-based and generation-based models to provide accurate and relevant answers.

Efficient Data Management

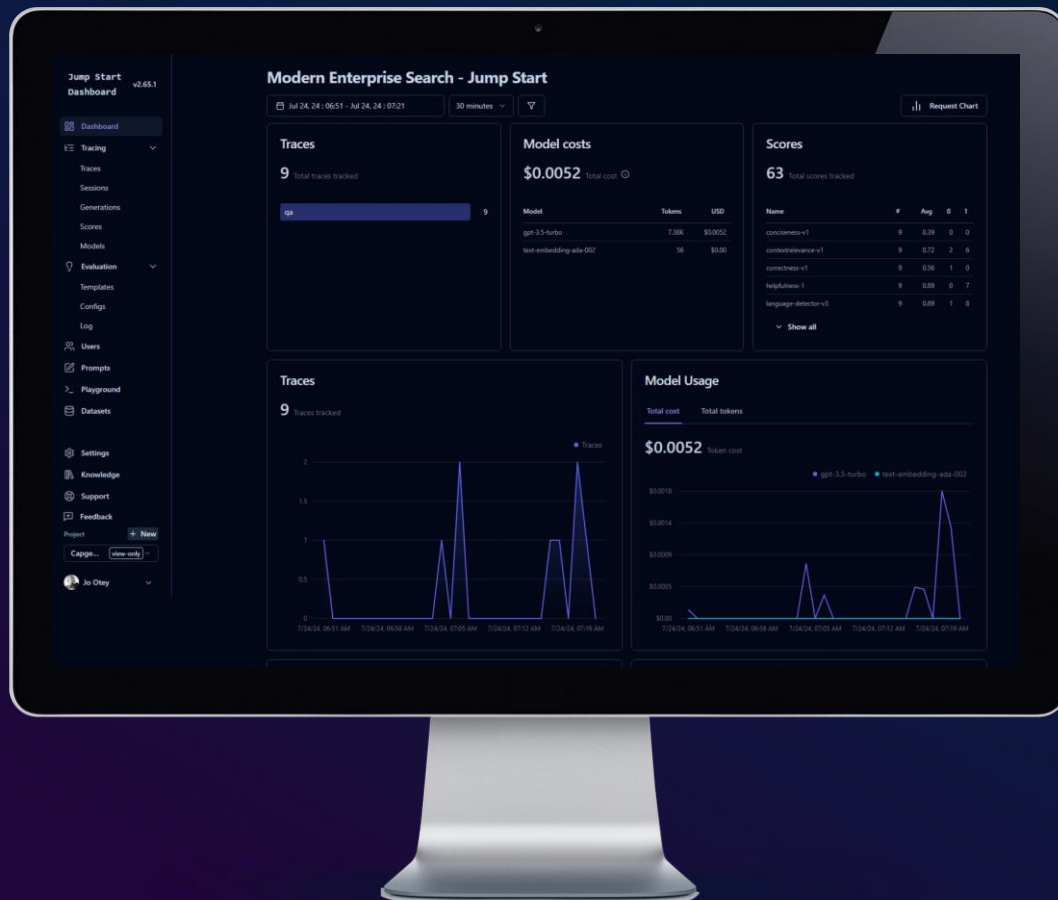

Simplifies the entire process of data ingestion, transformation, indexing, and multilingual translation. This ensures that the data is efficiently managed and readily available for retrieval

Explainability and Transparency

Modern Enterprise Search offers features like explainable thought processes and referenceable citations, providing transparency in how responses are generated.

Gen AI Model and Application Evaluation

A Gen AI Jump Start focused on enabling businesses to build, monitor, and improve their Gen AI applications. The workshop provides comprehensive discussion around tracing, evaluation, prompt management, and analytics capabilities for LLMOps and GenAI platform engineering.

Tracing and Debugging

Converts data into rich, compact natural language summaries, helping LLMs understand the context.

Evaluation and Quality Assurance

Creates potential goals, guiding users to focus on the most meaningful and impactful visualizations based on their data.

Prompt Management

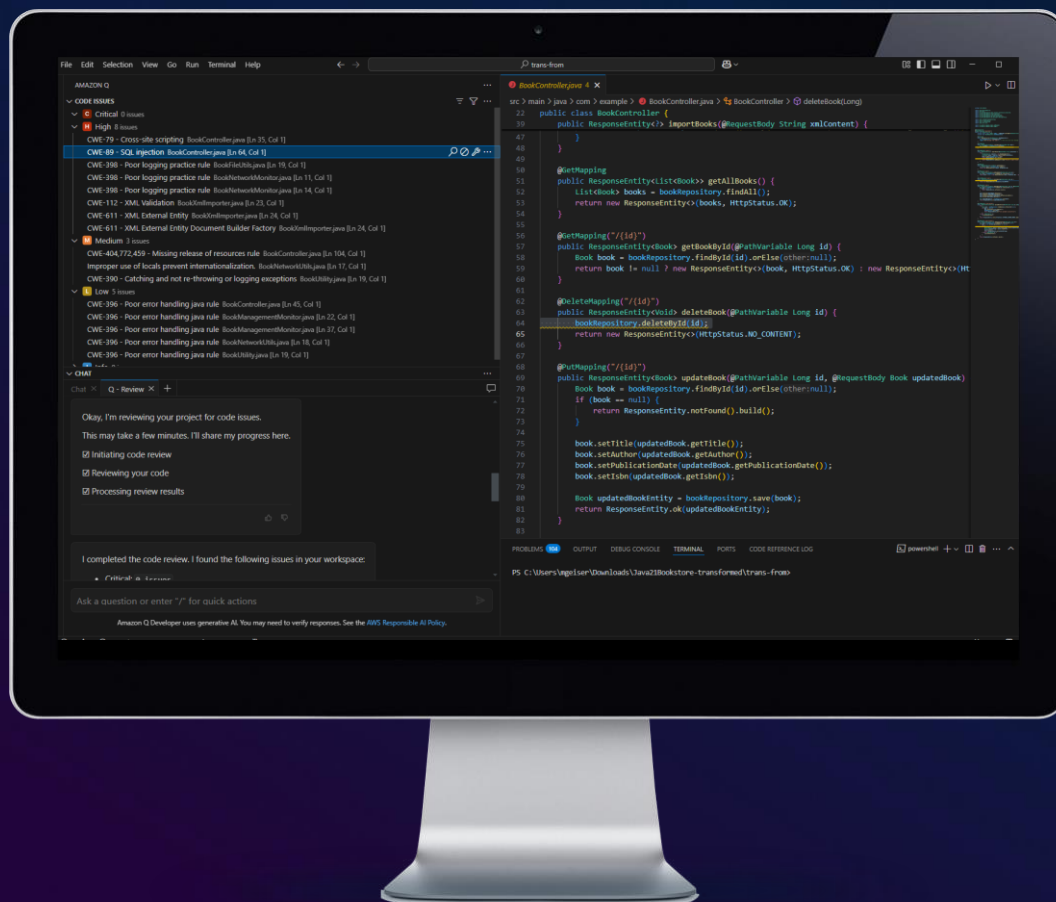

Generates, refines, and executes code, ensuring the output meets design, task, and perceptual standards.

Analytics and Performance Monitoring

Compiles metrics assess quality of generated visualizations, providing users with more confidence in the results.

Amazon Q

With specialized capabilities for software developers, business intelligence analysts, contact center employees, supply chain analysts, and anyone building with AWS, Amazon Q helps every employee get insights on their data and accelerate their tasks.

Amazon Q Developer

Streamline developers' tasks - from coding, testing, deploying, troubleshooting, performing security scanning and fixes, modernizing applications, optimizing AWS resources, and creating data engineering pipelines.

Amazon Q Business

Amazon Q Business makes it easier to get fast, relevant answers to pressing questions, solve problems, generate content, and take actions based on company content, data, and systems.

Amazon SageMaker AI

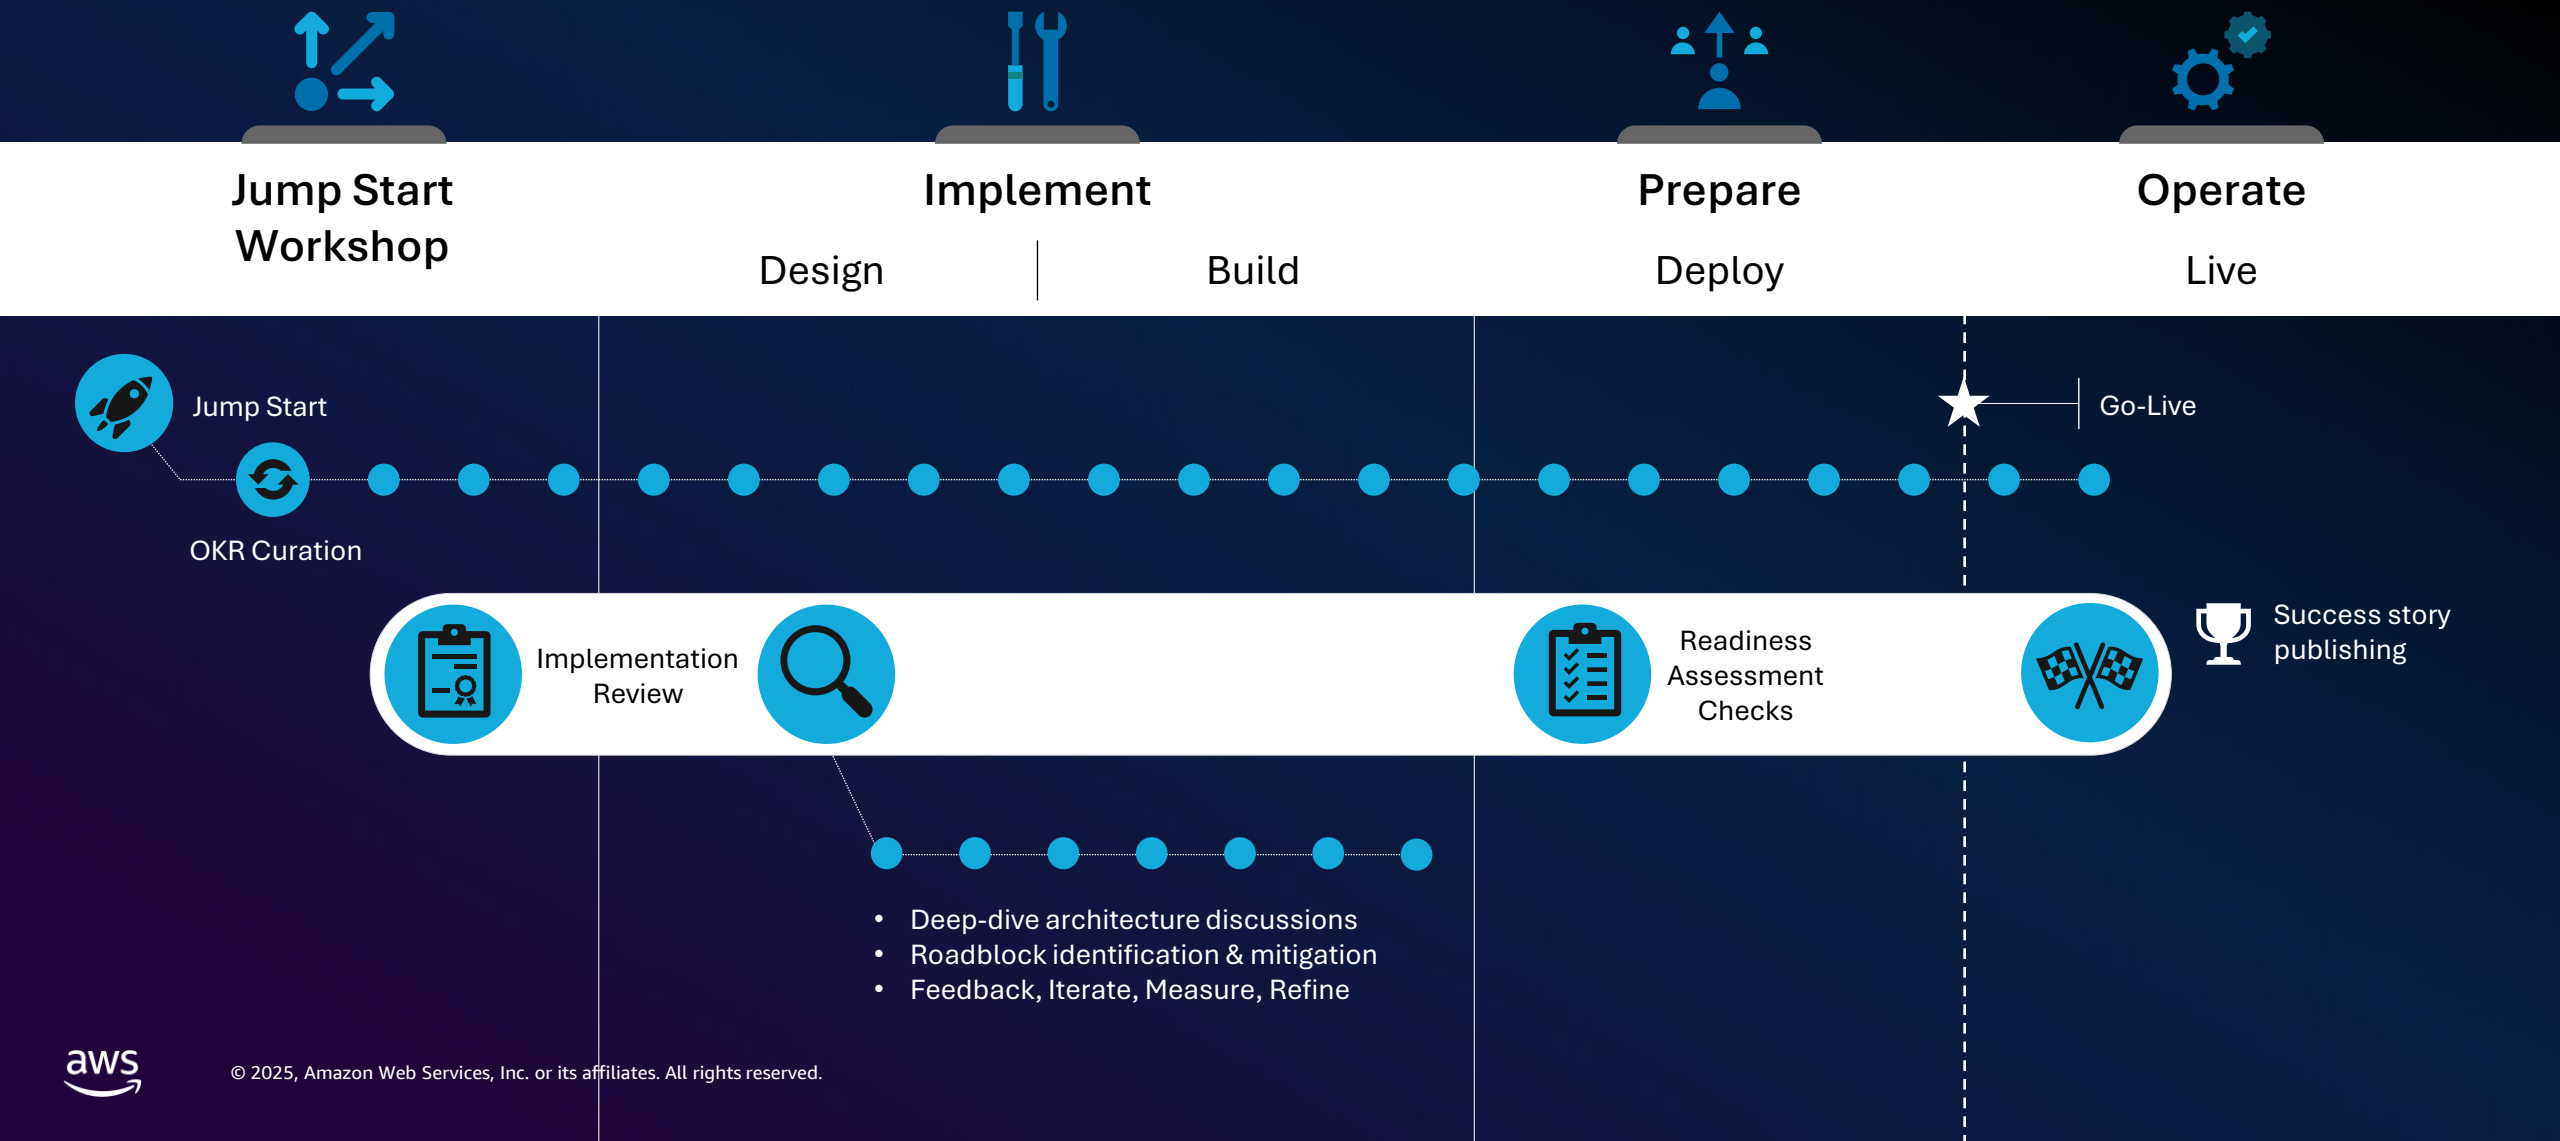

Accelerate ML/AI using built-in support for bring-your-own-algorithms and frameworks.

Anthropic & Claude

Anthropic and AWS are working together to accelerate the responsible deployment of generative AI.
